/note="Organ: lung; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Plasmid DNA from the normalized library NCI CGAP Lu5 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento

//clone_lib="CDNA from mouse aorta"
//note="Organ: aorta; Site 1: DpnII; Site 2: DpnII; CDNA
//note="Organ: aorta; Site 1: DpnII; Site 2: DpnII; CDNA
was prepared from whole aorta divided in atherosclerotic
plaque prone regions (aortic arch and abdominal aorta
proximal part) and less plaque prone regions (descending
thoraccic aorta and abdominal aorta distal part). CDNA was
fragmented with DpnII, linker ligated and amplified to
generated starting material for representational
difference analysis (RDA). The two cDNA pools were
subjected to iterative RDA subtraction and amplification
to enrich for gene fragments differentially expressed at
early stages of atherosclerosis."

Funding for EST sequencing was provided by an INRA funding
(AIFP00183). Funding for the cDNA library construction was provided
by an EEC contract (BOI4-CT95-0190).
The library was constructed by I. Hue, BDR, INRA, 78350
JOUY-EN-JOSAS, The double stranded cDNA was un-directionally cloned
in a TA cloning vector. bcai is a SMART cDNA library. Insert size
was between 450 and 3500 bp. Sequencing was done from the 5' end of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CR455364 Day 14 bovine embryos (bcai) Bos taurus cDNA clone bcai0015a.h.02 5', mRNA sequence.

/note="Vector: pBluescript SK-; Site 1: EcoRI; Site 2:
XhoI; At the trifoliate stage, M. truncatula plants were
transplanted to phosphate-free sand and grown for a
further 30 days. During this period, they were fertilized
twice weekly with 1/2 Hoaglands solutions containing 20uM
potassium phosphate. cDNA was prepared from polys+
enriched RNA. The cDNA was directionally ligated into the
Unizap XR vector from Stratagene and packaged using
Glapack III Gold packaging extracts. Plasmids containing
cDNA inserts were excised from the recombinant lambda-Zap
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 /tissue_type="roots"

Cloned unidirectionally. Poly(A)+ RNA was concentrated and purified
using Dynabeads (Dynal) and mRNA eluted for first strand synthesis.
First strand cDNA was created using MMLV RT (Powerscript, Clontech)
and primed with oligo(aT) with XhoI site and 5'SMART 'anchor' added
using chimeric DNA-RNA oligo. 12 PCR cycles were done using first
stranded cDNA was digested using XhoI/NotI, fractioned on
Chroma-spin 400 columns (Clontech) and ligated to digested
pGEM-11xf(+) plasmid. Chemically competent DH10B cells were used as
host cells. Library materials provided by Dr. David Bird of North
Carolina State University. Library construction by Jeff Rousch. See
www.nematode.net for additional project information.
Putative full length read
The vector to vector length is 196

/note="Vector: plasmid (ampicillin resistant); Site 1:
XhoI; Site 2: NotI; Cloned unidirectionally. Poly(AT+ RNA
Was concentrated and purified using Dynabeads (Dynal) and
mRNA eluted for first strand synthesis. First strand cDNA
was concentrated using MMIV RT (Powerscript, Clontech) and
primed with oligo(dT) with XhoI site and 5'MART anchor'
added using chimeric DNA-RNA oligo. 12 PCR cycles were
done using first strand and primers specific to SWART
oligo and 3' end. Double stranded cDNA was digested using
XhoI/NotI, fractioned on Chroma-spin 400 columns
(Clontech) and ligated to digested pGEM-11zf(+) plasmid.
Chemically competent DH1DB cells were used as host cells.
